BREAST CANCER

Breast cancer is the most commonly diagnosed non-skin cancer as well as the second leading cause of cancer death among American women, killing approximately 43,000 annually. It is estimated that 175,000 women will be diagnosed with breast cancer in 1999. Factors that increase the risk of breast cancer include: older age, family history of breast cancer (approximately 5-10% of breast cancer is inherited), early onset of menstruation, history of benign breast disease, older age at birth of first child, and alcohol consumption. However, as many as 60% of breast cancers occur in women with no known risk factors except increasing age.

October has been designated as National Breast Cancer Awareness Month. HHS has made it a priority to understand how breast cancer develops and how to prevent, detect and treat this illness in women across different age groups and socioeconomic and cultural backgrounds. Since FY 1993, HHS has nearly doubled its discretionary spending on breast cancer from \$283 million to an estimated \$550 million today.

ADOLESCENT SUICIDE

Each year in the United States between 2000-2500 adolescents kill themselves, making suicide the second leading cause of death among 15-19 year olds. The literature indicates that for each successful adolescent suicide, approximately 100-200 suicide attempts occur. Adolescent females are 3 times more likely than their male peers to attempt suicide while adolescent males are 4 times more likely than their female peers to complete the act. Research indicates that a consensus on the causes of adolescent suicide has not been reached but suicide studies have identified many risk factors. Among the risk factors linked to adolescent suicide are: depression, substance abuse, previous suicide attempts, suicidal behavior among family members or acquaintances, sexual abuse, and poor social integration. NIMH is currently funding research to determine psychiatric risk factors for suicide in adolescents.

COCAINE ABUSE AND ADDICTION

Cocaine is a powerfully addictive stimulant that is produced from cocoa leaves. The literature indicates that cocaine abuse and addiction continues to be a problem in the United States. An estimated 1.5 million Americans 12 years of age and over are chronic cocaine users. Research indicates that cocaine affects the ventral tegmental area (VTA) of the brain. Nerve cells in the VTA extend to the region of the brain known as the nucleus accumbens which is one of the brain's key pleasure centers. When cocaine is present, it attaches to dopamine transporters in the nucleus accumbens so that dopamine collects in the synapse which results in the pleasurable effects of cocaine. NIDA is working to translate what scientists learn about the effect of cocaine

on the brain to develop effective strategies for prevention and treatment of cocaine addiction.

HIV IN CORRECTIONAL SETTINGS

The Centers for Disease Control and Prevention and the Health Resources and Services Administration have announced the availability of funds for a cooperative agreement program entitled HIV Prevention, Intervention, and Continuity of Care Within Correctional Settings and the Community. The purpose of this program is to support projects within correctional facilities and the community that develop models of comprehensive surveillance, prevention, and health care activities for HIV, STD's, tuberculosis, substance abuse, and hepatitis. The literature indicates that despite the need for targeted HIV prevention interventions for prison inmates, institutional and access barriers have impeded the development and evaluation of such programs. Research suggests that a comprehensive continuum of care including treatment, access to drug therapies, substance abuse treatment, mental health, dental services, and support services which promote health and enhance quality of life are necessary for inmates who are at high risk of becoming infected and transmitting HIV to others.

OFFICE VISIT DURATION WITH PRIMARY CARE PHYSICIANS

The optimal management of physicians' time is an important part of controlling health care costs. The literature indicates that office visit duration is one factor affecting physicians' time during daily practice. Office visit duration or the length of time a patient is seen by a physician in an office setting is influenced by several variables. These variables include the characteristics of the physician, patient, practice setting and content of the visit. Research from the 1991-1992 National Ambulatory Medical Care Survey indicates that adults visit with their primary care physicians an average of 16 minutes per visit. Increasing age, the presence of psychosocial problems, and visit content are associated with increased duration, while availability of non-physician support personnel, health maintenance organizations, and Medicaid insurance are associated with reduced duration of visit. AHCPR is supporting research studying duration of office visits to primary care physicians.

PROSTATE CANCER

Prostate cancer is defined as a malignant tumor growth within the prostate gland. The literature indicates that prostate cancer is the second leading cause of cancer mortality in men with 180,000 new cases and an estimated 37,000 deaths expected in 1999. Research indicates that prostate cancer occurs almost exclusively in men over 40 years of age and is still rare until age 50. It has been reported that African American men are at higher risk than white men for prostate cancer and have more than twice the mortality rate. When prostate cancer is detected at an early stage, cure rates are high. Survival rates for all stages have risen from 50 - 87%. NCHS is currently doing research on prostate cancer.

REINVENTING GOVERNMENT

Since 1990, the management staff of the Parklawn Health Library has selected 10 journal articles per month on innovative management techniques to appear in each Bulletin. First entitled "Total Quality Management," this recurring bibliography was renamed "Reinventing Government" to reflect and support the Administration's efforts to create a government that works better and costs less.

61. THE FIRST 30 DAYS: THE MOST CRITICAL TIME TO INFLUENCE EMPLOYEE SUCCESS. Mahaffey, C. *Employ Relat Today* 26:53-60, Sum '99.
62. IMPROVING CUSTOMER SATISFACTION THROUGH MASS CUSTOMIZATION. Duray, R. *Qual Progress* 32:60-6, Aug '99.

63. THE NEW WORKFORCE INVESTMENT ACT. Pantazis, C. *Train Dev* 52:48-50, Aug '99.
64. ORGANIGRAPHS: DRAWING HOW COMPANIES REALLY WORK. Mintzberg, H. *Harv Bus Rev* 72:87-94, Sep-Oct '99.
65. ORGANIZATIONAL EVOLUTION: THE AMERICAN LIFE CYCLE. Fletcher, DS. *Natl Productivity Rev* 18:29-36, Aut '99.
66. PERFORMANCE IMPROVEMENT: WHAT TO KEEP IN MIND. Fox, D. *Train Dev* 26:38-40, Aug '99.
67. STRATEGIES FOR RETAINING HAPPY EMPLOYEES AND INCREASING COMPANY PROFITS. Welch, T. *Employ Relat Today* 26:15-24, Sum '99.
68. A TEMPLATE FOR ACCELERATING THE DEVELOPMENT OF SELF-MANAGED WORK TEAMS. Carroll, B. *Natl Productivity Rev* 18:21-8, Aut '99.
69. TRACKING THE ULTIMATE COMPETITIVE WEAPON: SERVICES-TO-ORDER CAPABILITY. Blevins, P. *Natl Productivity Rev* 18:47-52, Aut '99.
70. YOU CAN IMPROVE ALMOST ANY PROCESS. Miller, GJ. *Natl Productivity Rev* 18:59-65, Aut '99.

SELECTED NEW ACQUISITIONS

To permit review of all books and reports in this list, they will not be circulated until three weeks from the date of this Bulletin. All materials are available for review on the NEW BOOKS display shelf near the Service Desk of the Library. You may reserve any book simply by completing the yellow strip form available on the display shelf.

GUIDE TO LIBRARY RESOURCES

CHILDREN'S HEALTH. Medical Consultant, Thomas C. Jefferson; Project Editor, Tracy Irons-Georges. Salem Press, Inc., Hackensack, NJ, 1999. REF-DICT WA 12 C43793

This two volume reference source contains over 350 alphabetically arranged entries which deal with children's health. Entries that contain over 1000 words are broken down into several subsections. Entries which provide information about diseases contain the following sections:

Name of disease or disorder	Key terms
Causes and symptoms	Also known as
Treatment and therapy	Specialties and related fields
Perspective and prospects	Ages affected
Further reading	Definition

ENCYCLOPEDIA OF IMMUNOLOGY. Delves Peter J., ed. Academic Press, New York, NY, 1998. REF-DICT QW 513 E56

The second edition of the Encyclopedia of Immunology consists of four volumes with 630 entries contributed by 1200 authors. Due to the advances in the last six years in the field of immunology, the vast majority of the articles have been totally rewritten. Entries are arranged in alphabetical order with 64 new entries added since the first edition. Examples of entries include:

Antigens	Epstein-Barr Virus
Immunoglobulin genes	Phorbol esters
Clonal selection	Human immunodeficiency viruses
Molecular mimicry	Thymus

LIBRARY CLIENTELE

The Parklawn Health Library System serves the following components of the Department of Health and Human Services (HHS):

- Administration for Children and Families
- Administration on Aging
- Agency for Health Care Policy and Research
- HHS Regional Offices
- Health Resources and Services Administration
- Indian Health Service
- National Center for Health Statistics
- National Institute of Mental Health
- National Institute on Drug Abuse
- Office of the Secretary
- Office of Public Health and Science
- Program Support Center
- Substance Abuse and Mental Health Services Administration

LIBRARY MISSION

The Parklawn Health Library, the NCHS Staff Research Library, and the Information Resources Center plan, develop, and administer a national research collection and innovative information programs in direct support of the Department of Health and Human Services.

LIBRARY COLLECTION

The Scope of the collection includes the delivery of health care, health administration, health policy, health services research, health promotion and disease prevention, computer sciences, management sciences, medical sociology, health statistics, international health, epidemiology, public health, mental health, psychiatry and neurology, and substance abuse.
